- Trays are stackable with interlocking safety feature
- Fits most standard commercial dishwashers
- Additional option for twist cap

Vivreau, established in the late 80's, has grown to become the global leader in the development and manufacture of purified drinking water systems.

Our in-house research team has developed a range of equipment that has no parallel in this industry. Our systems incorporate the latest advances in design, purification and safety features, with a wide range of finishes and products. Purity of water is essential but it must be delivered in sufficient quantities at the correct temperature, particularly at peak demand times. Vivreau systems will guarantee this and, together with the VivreauCare Service Agreement, will ensure that the standard is maintained.

Vivreau Brita Partnership

In 2012 Vivreau and Brita entered into a global partnership combining the two leading brands in their respective industries. Brita with 50 years of experience in water filtration provide an invaluable support in ensuring that high quality water is dispensed from all Vivreau systems wherever they are installed in the world.

Environmentally Aware

Vivreau are proud to have been at the forefront of environmental initiatives within the water industry ever since the first Vivreau water system was conceived, and have always manufactured systems that are designed to help companies reduce their impact on the environment helping many to achieve ISO 14001 status as well as LEED certification and BREEAM rating.

Vivreau... ahead of the environmental curve
